PROFESSIONAL SUMMARY

B.Tech student in Artificial Intelligence and Data Science at KL University with a CGPA of 9.58/10 and project experience building web and Android application prototypes. Exploring software development with Java, Python, REST APIs, databases, and frontend technologies. Focused on strengthening implementation, testing, and problem-solving skills through hands-on projects.

TECHNICAL SKILLS

Languages: Java, Python, C (Fundamentals)
CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP)
Backend & Databases: Spring Boot, REST APIs, PostgreSQL, Firebase, Cloud Firestore
Web: React, TypeScript, JavaScript (ES6+), HTML5, CSS3
Android: Kotlin, Android Development
Tools: Git, GitHub, VS Code

ACADEMIC PROJECTS

DSA Tracker – Problem Practice Web App *React | TypeScript | Spring Boot | PostgreSQL | JWT*
Personal Project *2026 – Present*

- Built a problem-tracking web app with a React (Vite + TypeScript) frontend and a Spring Boot REST API backend using PostgreSQL, implementing JWT-based authentication and user-specific data access.
- Designed an attempt-logging system that records thinking ability, coding ability, time/space complexity, and confidence per attempt, with problem status auto-derived from the latest attempt and a revisit queue driven by stored next-review dates.
- Developed an approval-based friend-sharing feature allowing users to grant read-only access to their full problem log, including attempts, approach notes, and a contribution heatmap.

CP Contest Tracker (CodeCountdown) – Android App *Kotlin | MVVM | Retrofit 2 | Material Design 3*
Personal Project *2025 – Present*

- Developed an Android application in Kotlin using MVVM and Repository Pattern, integrating the CLIST API (v4) via Retrofit 2 and Kotlin Coroutines to display live and upcoming contests from Codeforces, LeetCode, CodeChef, and AtCoder.
- Built a filtering system with a scrollable day-selector and multi-choice platform chips (Material Design 3), backed by LiveData to update the contest list when filters change.
- Implemented local contest reminders using AlarmManager and NotificationCompat with a BootReceiver to reschedule alerts after device reboot, and stored user theme and platform preferences via SharedPreferences.

Digital Spending Tracker *HTML5 | CSS3 | JavaScript | Firebase | Chart.js*
Personal Project *Jan 2026 – Present*

- Implemented income and expense tracking with custom category creation and transaction history using Firebase Authentication and Cloud Firestore for multi-device data access.
- Added category-level spending anomaly detection using a Z-score threshold of 2, flagging transactions that exceed 2 standard deviations from a category's historical mean.
- Built a Chart.js dashboard to visualize spending by category, over time, and by day of week, and added Excel export for full transaction history download.

EDUCATION

KL University Hyderabad, Telangana, India
Bachelor of Technology – Artificial Intelligence & Data Science *2024 – Expected 2028*
CGPA: 9.58 / 10.0

CERTIFICATIONS

- **AI Fluency for Students** – Certificate of Completion *2024*
