Dhruv B

Software Development | Backend & Full-Stack Engineering | Android Development

[dhruvb324@gmail.com] • +91-9933260140 • [linkedin.com/in/dhruvb-tech] • github.com/Dhruv-1309 • codolio.com/profile/Dhruv_13

EDUCATION

KL University (Koneru Lakshmaiah Education Foundation) **2024 – 2028 (Expected)**
Bachelor of Technology in Artificial Intelligence & Data Science **CGPA: 9.58 / 10.0**

TECHNICAL SKILLS

Languages:	Java, Kotlin, TypeScript, JavaScript (ES6+), Python, C, SQL, HTML5, CSS3
Backend & Frameworks:	Spring Boot, Spring Security, Spring Data JPA, Hibernate, React (Vite), Android SDK, Retrofit 2, Kotlin Coroutines, Chart.js
Databases & Security:	PostgreSQL, Cloud Firestore, Firebase Authentication, Stateless JWT (JJWT), Google OAuth 2.0, BCrypt, Rate Limiting, CORS/CSP/HSTS
Tools & Core Concepts:	Apache Maven, Git, GitHub, RESTful APIs, Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), MVVM, Repository Pattern

PROJECTS

DSA Tracker – Full-Stack Problem Practice Platform
github.com/Dhruv-1309/dsa-tracker

Tech: Java, Spring Boot, Spring Security, Spring Data JPA (Hibernate), PostgreSQL, React (Vite + TypeScript), JWT, Maven

- Architected **35 RESTful API endpoints** across **10 Spring Boot controllers** and **8 normalized PostgreSQL tables** (6 core entities and 2 many-to-many join tables for topics and mistake tags) backing a React + TypeScript SPA
- Engineered stateless auth and API hardening with **Spring Security**, **JJWT (0.12.6)**, **Google OAuth 2.0**, and **BCrypt**, adding an in-memory token blacklist (`TokenBlacklistService`) for instant logout revocation and a bucket-based **RateLimitingFilter** (**HSTS**, **CSP**, `X-Frame-Options`) against brute-force abuse
- Eliminated **Hibernate N+1 query bottlenecks** across nested attempt and mistake-tag collections by configuring `@BatchSize(size = 100)`, multi-column PostgreSQL indexes, and custom **JPQL projections** with automated entity timestamp auditing (`@CreationTimestamp`/`@UpdateTimestamp`)
- Built a priority-sorted spaced-repetition revisit queue, a **365-day practice heatmap**, and an approval-based friend-sharing state machine (`PENDING/ACCEPTED`) granting read-only peer access to solutions, complexity logs, and mistake frequency analytics

Contestory (CodeCountdown) – Competitive Programming Contest Tracker
github.com/Dhruv-1309/Contestory

Tech: Kotlin, Android SDK, MVVM, Repository Pattern, Retrofit 2, Kotlin Coroutines, LiveData, Material Design 3

- Developed a native Android application in **Kotlin** using **MVVM** and the **Repository Pattern**, integrating the **CLIST REST API (v4)** via **Retrofit 2** and **Kotlin Coroutines** for non-blocking synchronization of live and upcoming contests across **4 major platforms** (Codeforces, LeetCode, CodeChef, and AtCoder)
- Designed a reactive multi-criteria filtering engine featuring a scrollable day-selector and multi-choice **Material Design 3** platform chips backed by **LiveData** observers for real-time UI state updates
- Implemented persistent local contest reminders using **AlarmManager** and **NotificationCompat** paired with a system **BootReceiver** to automatically reschedule pending alerts across device reboots using **SharedPreferences** state

Digital Spending Tracker – Expense Analytics & Anomaly Detection
github.com/Dhruv-1309/Digital-Spending-Tracker

Tech: JavaScript (ES6+), HTML5, CSS3, Firebase Authentication, Cloud Firestore, Chart.js

- Built a multi-device income and expense tracking web application utilizing **Firebase Authentication** and **Cloud Firestore** for real-time NoSQL transaction persistence and custom category creation
- Engineered automated category-level spending anomaly detection using a statistical **Z-score threshold of 2** ($|Z| > 2$), dynamically flagging outlier transactions exceeding **2 standard deviations** from historical category means
- Developed an interactive **Chart.js** analytics dashboard visualizing expenditure across **3 dimensions** (by category, time-series trend, and day of week) alongside client-side **Excel export** for full transaction history downloads

ACHIEVEMENTS & CERTIFICATIONS

- **Competitive Programming & DSA (Codolio Profile):** Solved **968+ algorithmic and competitive programming problems** and competed in **146 rated contests** across LeetCode, CodeChef, Codeforces, AtCoder, GeeksforGeeks, and HackerRank over **240+ active coding days**
- **Coding Badges & Milestones:** Earned the **LeetCode 100 Days Badge (2026)** and **50 Days Badge (2026)** (257 DSA problems solved, 43 contests, peak rating **1,439**), alongside **CodeChef 500+ Problems Solved** and **50+ Contests** badges (677 problems solved across 96 contests)
- **Certifications: AI Fluency for Students** – Certificate of Completion (2024)
